

Mobility and quality of life

For our cities and rural communities

@Felix Kästle

Baden-Württemberg

MINISTRY OF TRANSPORT

Baden-Württemberg is driving the transformation of the transport sector.

We are committed to reduce CO₂ emissions from transport by more than half by 2030.

That is why we reshape mobility for our citizens in urban areas and rural communities. Our goal is to promote a new form of mobility that improves our health and raises the quality of life. It will enable everyone to participate actively in society while protecting our climate.

We are pursuing a transition to electric mobility and other climate-friendly technologies. We are committed to overhaul the mobility sector by switching to environmentally-friendly forms of transport.

That is why our public transport services have experienced a massive upgrade in recent years. We have made it easier to use buses and trains. What is more, we have extended the network of attractive cycle paths and footways.

We invite you to explore the goals and issues that are being pursued by the Ministry of Transport and join us in achieving sustainable mobility.

Winfried Hermann MP
Minister of Transport
Baden-Württemberg

Elke Zimmer MP
State Secretary

Berthold Frieß
Director General

Ministry of Transport fields of activity

car-sharing

autonomous driving

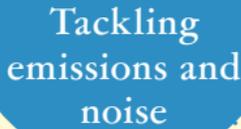

digital roadworks management

mobility data

noise from motorcycles

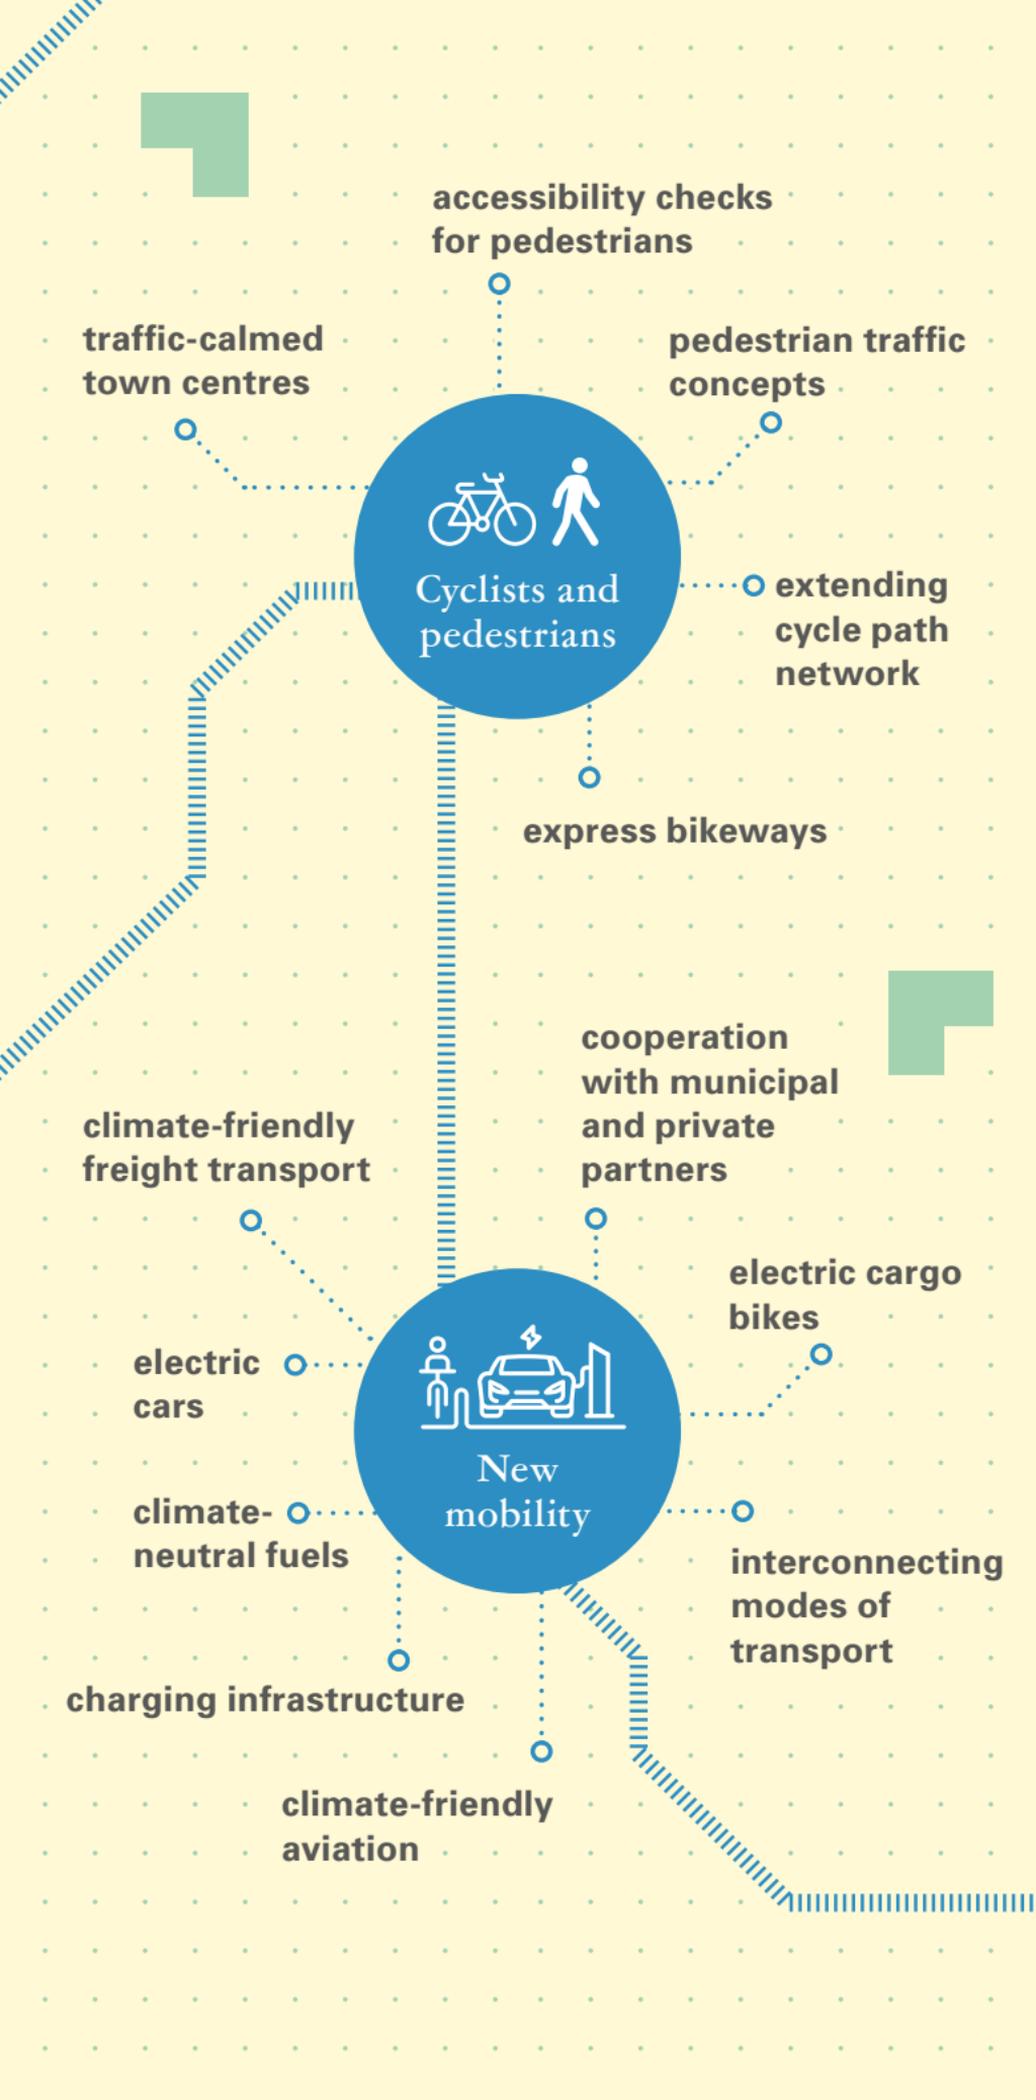

noise action plans

climate action and adaptation

speed limits

measures to ensure air quality

Cyclists and pedestrians

accessibility checks for pedestrians

pedestrian traffic concepts

traffic-calmed town centres

extending cycle path network

express bikeways

New mobility

cooperation with municipal and private partners

climate-friendly freight transport

electric cargo bikes

electric cars

climate-neutral fuels

interconnecting modes of transport

charging infrastructure

climate-friendly aviation

regional buses and on-demand transport services

expanding services and infrastructure

reactivation of railway lines

mobility incentives for local authorities

fares

Train and bus

digital rail

community buses

reliable and regular mobility services

environmentally-friendly propulsion systems

accessibility

traffic information

nature conservation

road maintenance services

Roads

maintaining roads and bridges

road safety

sustainable road construction

Our goal: transforming the transport sector by 2030

Double public transport usage

Every second car is climate-neutral

-55%
CO₂

Climate-neutral transportation of every second tonne of freight

Every second journey is done walking or by bike

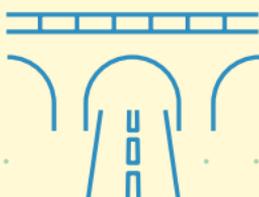

One fifth less car traffic in cities and rural areas

Our work in numbers

7,300

bridges
on federal and
state highways

8,000
kilometres

cycle path
network called
RadNETZ BW

1.75
million

train journeys
per year

11 million
pedestrians
